ANTI- CANCER MEDICATION (ONCOLOGY) -

Cancer is a disease in which some of the body's cells grow uncontrollably and spread to other parts of the body. Cancer is a complex group of diseases characterized by the uncontrolled growth and spread of abnormal cells. The cancerous disease can be effectively treated with anticancer medication. and, a variety of medications that do not belong to such classes yet have anticancer action and are utilized to treat cancer diseases. The choice of which anti cancer medicine to take is influenced by a variety of variables, such as the type and location of cancer, its intensity, whether surgeries or radiation therapy is to be performed.
